

AWS Lex Chatbot – Part 1 Implementation Report

1. Introduction

This document outlines the creation of a basic chatbot using Amazon Lex as part of the AWS Lex Chatbot Creation project. The objective of Part 1 was to design and configure a simple chatbot capable of responding to a predefined user question about an AWS service.

2. Objectives

- Create an Amazon Lex chatbot.
- Configure the chatbot using English (ZA) language settings.
- Create one intent.
- Add one utterance related to an AWS service.
- Provide a predefined response.
- Build and test the chatbot successfully.

3. Bot Configuration

Bot Name: **CloudLearnersBot**

Language Selected: **English (ZA)**

- AWS Service Topic: **Amazon Lex**

Create bot				

4. Intent Creation

Intent Name: **S3Info**

Utterance Used: **What is S3?**

5. Response Configuration

Bot Response: **Amazon S3 (Simple Storage Service) is an AWS cloud storage service that lets you store and retrieve data securely from anywhere.**

6. Build and Testing

After configuring the intent and response, the chatbot was built and tested using the Amazon Lex test window. The chatbot successfully responded to the user's utterance with the programmed response.

Creation method

Traditional Generative AI

- ☒ **Create a blank bot**
Create a basic bot with no preconfigured languages, intents, and slot types.
- ☐ **Start with an example**
An example bot has preconfigured languages, intents, and slot types. You can change these settings.
- ☐ **Start with transcripts**
Automatically generate intents from conversation transcripts that you upload. Only English (US) language is available when starting with a transcript.

Bot configuration

Bot name

CloudLearnersBot

Maximum 100 characters. Valid characters: A-Z, a-z, 0-9, -, _

Description - optional
This description appears on bot list page. It can help you identify the purpose of your bot.

IT HelpDesk bot for employees in the North America office.

Maximum 2000 characters.

•

8. Conclusion

The chatbot was successfully created using Amazon Lex. This foundational implementation demonstrates understanding of intents, utterances, and predefined responses, forming the basis for the advanced quiz chatbot developed in Part 2 of the project.
